

Exploring male users

FT User Research

Jan '26 

Background & Goals

- This research aims to understand Facetune and non-FT male users, their current behaviours, editing patterns & motivations
- The goal is to identify user segments to guide product and marketing strategies

What was done?

Method:

A quantitative **large-scale survey** with multiple-choice questions

500

Facetune users

500

FaceApp users

500

Non-FT users

(i.e., Picsart, Canva,
Lightroom, VSCO)

Aged 18–45

Male

The bottom line

Main takeaways to remember

- **Facetune and FaceApp users show similar editing patterns with no statistically significant differences** – they use face, skin and photo enhancement editing similarly.
- **Facetune and FaceApp users differ significantly from non-Facetune users:**
 - Non-FT users prioritize overall picture editing: photo enhancement (76%), backgrounds (64%), creative effects (48%)
 - Non-FT users show **lower interest** in face, skin, body, and hair editing features
 - (face: 20.8%, skin: 29.3%, body: 19.4%, hair: 13.2%)

Facetune male users

Who are they?

Top interests:

50.9%

Photography

****Significantly
higher than
FaceApp (28.0%)*

38.9%

Gaming

37.3%

**Social
media/content
creation**

34.9%

**Technology &
gadgets**

Who are they?

Platform:

62.1%

iOS users

****significantly
higher than other
segments at ~54%*

Motivations to edit photos

- Improve photo clarity or image quality – 20.2%
- To look my best in photos – 17.4%
- Experiment with creative edits and effects – 17.2%

FaceApp male users

Who are they?

Top interests:

40%

Gaming

30.8%

**Social media /
content creation**

28%

Photography

26.8%

**Technology &
gadgets**

18.3%

**Outdoor
enthusiasts**

****Significantly higher than
other segments*

Motivations to edit photos

- Experiment with creative edits and effects – 19.7%

- To look my best in photos – 15.9%

Facetune awareness among Faceapp users

✗ 23.9% have NEVER heard of Facetune

👂 42.5% heard of it but never tried

↺ 33.6% tried it but stopped using

} 66.4% Never tried Facetune

Non-FT male users

Mainly using Picsart, Canva, photoshop,
lightroom and VSCO

Who are they?

Top interests:

44.9%

Gaming

40.7%

Photography

35.7%

**Social media /
content creation**

35.5%

**Technology &
gadgets**

Who are they?

Current career or professional role:

11%

Freelance or self-employed

****significantly
higher than other
segments*

Motivations to edit photos

- Improve photo clarity or image quality - 24.2% - Highest among all segments
- Experiment with creative edits and effects - 22.2%
- To use for Professional / business purposes - 13.8% - Highest among all segments
- To look my best in photos - 9.6% - Lowest among all segments

What they edit & do with the edited photos?

****Significantly higher than other segments*

23% Product images (e.g., for business or social media)

18.6% Landscape or travel photos

16% Use the edited photos for professional / work purposes

Facetune awareness among non-FT users

✗ 36.1% have NEVER heard of Facetune

👂 48.1% heard of it but never tried

🔄 15.8% tried it but stopped using

} 84.2% Never heard or tried
Facetune

****Significantly lower awareness than
FaceApp users*

Overview & Main takeaways

Male users: Editing behavior comparison

— = not significant
✓ = statistically significant
= appearance features
= overall picture features

Edit Type	FT %	FA %	Non-FT %	FT vs FA	FT vs Non-FT	FA vs Non-FT
Face adjustments	39.7%	35.6%	20.8%	—	✓	✓
Skin editing	40.1%	36.2%	29.3%	—	✓	✓
Body editing	25.3%	25.6%	19.4%	—	✓	✓
Hair editing	25.5%	22.1%	13.2%	—	✓	✓
Makeup	13.2%	14.9%	8.8%	—	✓	✓
Photo enhancement	61.9%	57.9%	76.0%	—	✓	✓
Background editing	55.1%	50.1%	63.5%	—	✓	✓
Creative effects	39.1%	36.0%	47.7%	—	✓	✓

Key pattern: User behaviour gap

Facetune/FaceApp Users

APPEARANCE FEATURES

Skin Editing

36-40%

Face Adjustments

36-40%

TECHNICAL FEATURES

Photo Enhancement

58-62%

Non-Facetune Users

APPEARANCE FEATURES

Skin Editing

29%

Face Adjustments

21%

TECHNICAL FEATURES

Photo Enhancement

76%

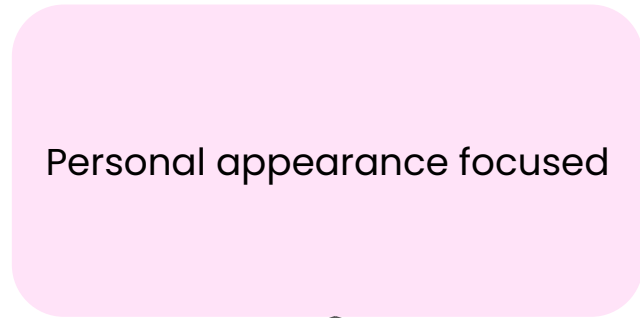

The **11-19 point gap** in appearance features indicates fundamentally different user motivations

Main takeaways

- **Facetune and FaceApp users show similar editing patterns with no statistically significant differences** – they use face, skin and photo enhancement editing similarly.
- **Facetune and FaceApp users differ significantly from non-Facetune users:**
 - Non-FT users prioritize overall picture editing: photo enhancement (76%), backgrounds (64%), creative effects (48%)
 - Non-FT users show **lower interest** in face, skin, body, and hair editing features
 - (face: 20.8%, skin: 29.3%, body: 19.4%, hair: 13.2%)

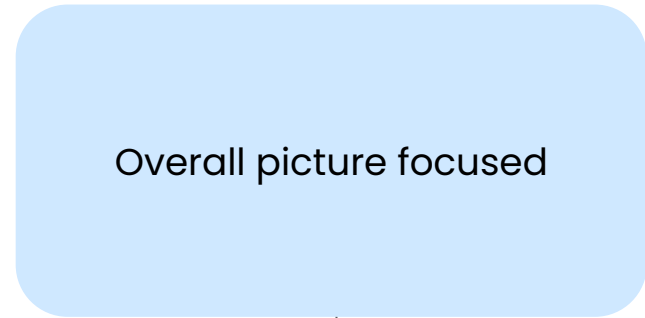

Main takeaways & Discussion

There are two distinct male user segments:

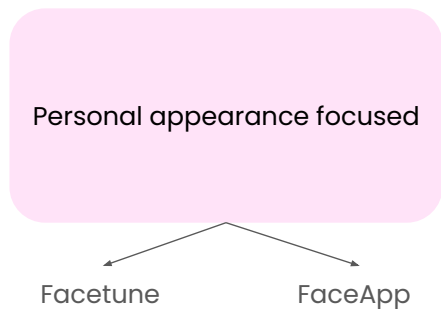

Facetune

FaceApp

Non-FT

Main takeaways & Discussion

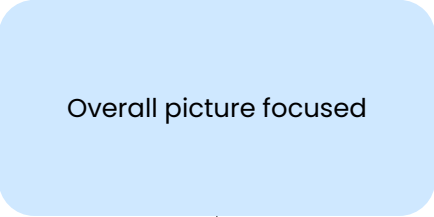

Efforts for appearance-focused males (FaceApp Users)

FaceApp users show nearly identical editing behavior to our current Facetune users. To attract them:

- **Personalizing the experience for male users** to make it feel more relevant and engaging
- **Enhance 'appearance-focused' features** males' rely on most (skin editing, face adjustments, background editing and photo enhancement tools)
- **Competitive marketing** tailored to their needs and preferences

Main takeaways & Discussion

Overall picture focused

Non-FT

Efforts for overall picture-focused males (New user acquisition):

Non-FT users (Picsart, VSCO, Lightroom users) have different editing patterns. To attract them requires:

- **Consider positioning ourselves as a overall photo editing tool**, not only an appearance editing app
- **Emphasize and further develop photo enhancement editing capabilities:** such as lighting/color adjustments, background editing, creative effects, etc.
- **Explore photo editing capabilities for professional use cases** tailored to male users, aligning with their editing goals and motivations

*** May require deeper exploration through qualitative research

Main takeaways & Discussion

Gaming emerged as a common interest across all male segments (39-45%). Consider:

- Gamification features to increase male engagement
- Marketing partnerships with gaming platforms
- Game-style challenges or rewards for editing milestone.

Main takeaways & Discussion

All male segments prioritize photo enhancement (58-76%) and background editing (50-64%)

Recommendation: We should consider investing in these universal features regardless of which acquisition strategy we pursue – they appeal to both appearance-focused and overall picture-focused males.
